

Introducing Ki Foundation

A proposed organization with a mission to reduce global poverty. We plan to reduce poverty by encouraging businesses worldwide to identify unutilized resources and use them to increase the production of goods and services. Increased production of goods and services is possible because the world still has an abundance of unutilized resources.

Once a sufficient increase in production has been achieved, we would then increase the money supply by creating a currency that businesses would have to accept for the goods and services resulting from increased production. The increased money supply is intended to enable consumers to purchase the goods and services resulting from the increased production. This is because a low money supply limits the consumption of goods and services since people would not have enough money to purchase them. Increasing production alongside the money supply would reduce poverty because people would be able to afford more goods and services with the additional money. Increased production would further help reduce poverty by creating additional income opportunities for investors, jobs for the unemployed, and better-paying work for lower-income earners.

The currency we will create would be digital rather than physical because, when it is oversupplied, it would be easier to stop inflation. This is because digital currencies are faster to remove from circulation, as they can be accessed and managed electronically. We will supply our currency to users in the form of grants. Users will be able to receive these grants through a digital wallet that we will create. The wallet will be accessible through our mobile and web applications and will also be used to conduct transactions using our currency.

Since the goods and services resulting from increased production will initially be produced using other currencies, it will be impossible to price them in ours. To enable this, one unit of our currency would have to be considered equal to one US dollar. This is because our currency would be intended for global use, and most international goods and services are priced in US dollars. The equal value to the US dollar would remain stable because we plan to encourage our currency to be used to produce all kinds of goods and services. This would eliminate the need to exchange it for other currencies in order to obtain goods and services produced using them.

Since our organization is still a proposal, we are kindly seeking your support in funding its establishment. The funds are mostly needed to widely spread our solution, since we need a global increase in production for it to work. If you would like to support us, visit our website **kifoundation.site** and make a donation.
